1 FKDSDDIYAQIFQITDKGTA.....GDIQKLQNAYLDKLGMKNAF 215

Scoring table: PAM 150 Gap 11

Searched: 1479 segs, 387401 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: HIV-AA8 1:ALL

Statistics: Mean 42.724; Variance 87.119; scale 0.490

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Scoring table: TABLE bktranslate2 Gap 30

Nmatch

STD:

Dbase 0; Query 0

Searched: 1052 seqs, 1486975 bases  $\times$  2

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

1:H\_PRI 2:H\_UNA 3:H\_VIR

Statistics: Mean 71.740; Variance 150.863; scale 0.476

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sample has been taken from patient M, one of the seven

This sample has been taken from patient M, one of the seven

patients (A, M, L, F,C,V,R), in the study(1). All patients had acute,

patients (A, M, L, F,C,V,R), in the study(1). All patients had acute,

patients (A, M, L, F,C,V,R), in the study librarial patients of the virus to patient Viremia followed

by seroconversion. Patient M was a chronically infected male who

subsequently transmitted the virus to patient F. The authors

report that the sequences in this study are found to be uniformly

macrophage-tropic and non-syncytium-inducing. The sequence for

sample M clone 2, along with other patient M clones 1, 3-9, 11, and

12, is shown in alignment following the printed text entry. These

gag sequences cluster with HIV-1 B subtype sequences. See also L212

L21591 and L24161, L24462.

full staff review

This sample has been taken from patient F, one of the seven
patients (A,M,L,F,C,VR), in the study(1). All patients had acute,
patients (A,M,L,F,C,VR), in the study(1). All patients had acute,
self-limited symptomatic illness with measurable viremia followed
by seroconversion. Patient F was infected by patient M via sexual
transmission. The authors report that the sequences in this study
are found to be uniformly macrophage-tropic and nonsyncytium-
inducing. The sequence for sample F clone 10, along with other
patient F clones 1-9, 11, and 12, is shown in alignment following the
printed text entry. These gag sequences cluster with HIV-1 B subtype
sequences. See also L12124-L21591 and L24161, L24162.

Human immunodeficiency virus type 1
Viridae, ss-RNA enveloped viruses;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chimpanzee lymphocytes virology 194, 858-864 (1993) full staff_review full staff_review full staff_review full staff_review full staff_review funding provided in computer-readable form by Dr. Beatrice Hahn, CFAR, University of Alabama at Birmingham, Birmingham AL. This represents one of the most cytopathic variants that the authors of [1] have encountered. The BC virus is cytopathic in both human and chimp lymphocytes. This sequence clusters with HIV-1 subtype B sequences. SG3 is T-cell tropic as opposed to mono-

Kindly provided prior to publication by Shaw and Hahn, University
of Alabama. YUZ clusters with HIV-1 B subtype sequences. Four
full-length genomes were cloned from uncultured brain [1] and
compared [2]. YUZ, unlike three of the minimally defective clones
(see HIVYUIO>), was found to be replication competent and macro-
phage tropic. 10 nonsynonymous nucleotide differences are found
hatween YUZ and YUIO, 7 of which are seen in the env cds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Complete nucleotide sequence, genome organization, and biological properties of HIV-1 in vivo: Evidence for limited defectiveness and

Pairwise transfections with the defective genomes led to replication competent and transmissible virions. The authors of [2] argue that complementation among minimally defective genomes is "readily attainable" in vivo. 10 nonsynonymous nucleotide substitutions separate YULO and YU2, 7 of which are seen in the env cds. YULO has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   simple staff_entry

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic spock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating computer readable medium.

Claim 2: Pages 4-5; 39pp; English.

CC The invention relates to a UDP-N-acetylmuramate:L-alanine ligase

CC (Murc polypeptide) encoded by the S. aureus Murc gene. Host cells

CC containing an expression system comprising the Murc gene can be used for

CC the recombinant production of the polypeptide. Agonists or the Murc

CC polypeptide are used to treat conditions requiring increased activity or

CC competitive polypeptide are useful for inhibiting the polypeptide e.g.

CC competitive polypeptide are useful for inhibiting the polypeptide e.g.

CC competitive polypeptide are useful for inhibiting the polypeptide e.g.

CC competitive polypeptide are useful for inhibiting the polypeptide e.g.

CC competitive polypeptide are useful for inhibiting the polypeptide e.g.

CC competitive polypeptide are useful for treat in dwelling devices for

CC competitive polypeptide are useful to treat in dwelling devices for

CC antibacterial agents are useful to treat in dwelling devices for

CC infection prevention or generally as wound treatments to prevent adhesion

CC diagnosing or prognosing a (susceptibility to) disease, for raising

CC antibodies; to identify modulators or specific receptors; in rational

CC antibodies; to identify modulators or specific receptors; in rational

CC antibodies; to identify modulators or specific receptors; in rational

CC antibodies; to identify modulators or specific receptors; in rational

CC antibodies; to determine bacterial serotype; and for gene;

CC for chromosomal mapping; to determine bacterial serotype; and for gene;

CC for chromosomal mapping; to determine bacterial serotype; and for genetic

CC sequence (Murc ORF) of the Murc gene

Sequence (Murc ORF) of the Murc gene

Sequence 660.Bp; 233 A; 83 C; 120 G; 224 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                             The present sequence represents a MurC gene encoding a Staphylococcus aureus UDP-N-acetylmuramate:L-alanine ligase (MurC polypeptide). Host cell containing an expression system comprising the MurC gene can be used for the recombinant production of the polypeptide. Agonists or the MurC polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. competitive polypeptide are useful for inhibiting the polypeptide e.g. competitive polypeptide are useful for inhibiting the polypeptide e.g. competitive polypeptide are useful to treat in-dwelling devices for the antibacter pylori infections and related cancers, ulcers and gastritis. The Helicobacter pylori infections are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The MurC polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to identify modulators or specific receptors; in rational cuseful in antisense/riozyme therapeutics; to detect mutant MurC gene:
                                                                                                                                                              Query Match

respiratory tract and central nervous system Claim 1; Page 146; 390pp; English.

This sequence encodes a Staphylococcus aureus protein of unknown function, and represents a DNA Sequence of the invention.

The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to

Antagonists of the proteins are used for the inhibition of bacterial polypeptides. Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnossing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a protein from Streptococcus pneumoniae. The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against streptococcus pneumoniae, for treatment or prevention of infection eg. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein are used to detect corresponding antigens, to purify the protein are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pneumoniae - or their epitope-containing fragments, useful in protective or therapeutic vaccines, and for diagnosis Claim 1; Page 72; 118pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC on it, or a representative fragment or a sequence at least 95% identical Ct osEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 CC to 391 (V52134 to v52524) are genomic fragments from Streptcocccus CC pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae CE genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 CC to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleic acid from an organism, amplifying nucleic acid molecules whose nucleic acid from an organism, amplifying fragment of the S. pneumoniae genome to prime the amplification and consplict of the S. pneumoniae genome to prime the amplification and consplict of the S. pneumoniae genome to prime the pression modulating can be used in a computer based system for identifying fragments of the S. pneumoniae genome. Products from the pression be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                             Streptococcus pneumoniae polynucleotides - useful for developing products for diagnosis, prevention and treatment of infections e.g. pneumonia, bacteremia, meningitis or endocarditis claim 1; Page 151-152; 181pp; English.

The sequence is that of a Streptococcal polypeptide coding region. The polypeptide can potentially be used for the diagnosis and prevention of bacterial infections, especially Sp infection. It may be used for the treatment of diseases such as otitis media, conjunctivitis, pneumonia, bacteremia, meningitis, sinusitis, pleural empyema, endocarditis or infection of the cerebrospinal fluid.                                                                        PS Claim 1; Page 77; 235pp; English.

CC This sequence encodes an H. pylori cytoplasmic protein involved in CC outer membrane or cell wall blosynthesis. This sequence showed CC homology to N-acetylmuramate-Alanine ligase.

CC duodenal ulcer disease. The nucleic acid sequences of the invention CC duodenal ulcer disease. The nucleic acid sequences of the invention CC are used to evaluate compounds, especially activators or inhibitors of CC bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequences, and corresponding proteins, are CC sequence. The nucleic acid sequences and corresponding proteins, are CC sequence in detecting the presence of Helicobacter species in CC also useful for generating vaccines for immunising subjects against H. CC pylori or for use in detecting the presence of Helicobacter species in CC asample. Antisense nucleic acid sequences of these sequences are CC used to inhibit expression of a gene from Helicobacter species. H. CC pylori whole genomic DNA was isolated and nebulised to a median size of C2 2000 bp. Purified DNA fragments were blint-ended and ligated to unique CC Sequence adapters in 100-1000 fold molar excess. These linkers are cc complementary to the BstXI-cut pMPX vectors, while the overhang is not CC sequenced.

CC will the cut vector re-ligate itself easily. The linker-adapter inserts construct a series of CC sequenced.

CC sequenced libraries. The purified DNA samples were then
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ဌ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Дb
                                                                                                                                                                                                                                                    prolypeptide(s) - useful for vaccines to treat or prevent H. pylori infection, and to detect Helicobacter

SC Claim 9; Page -; 1481pp; English.

CC This sequence encodes a H. pylori cytoplasmic protein involved in conter membrane or cell wall biosynthesis.

CC The protein may be used in a vaccine to prevent or treat H. pylori conter infection or to identify H. pylori polypeptide binding compounds, cuseful as potential H. pylori life cycle activators or inhibitors.

CC The genomic sequence of H. pylori (ATCC 55679) was determined from coverlapping contigs generated by mechanically shearing the bacterial may be sequences were analysed for ORF of at least 180 nucleotides, cand the predicted coding regions defined by computer evaluation. To comply the sequences were analysed for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant conditions of the pylori antigens for vaccine development, the amino conditions of the pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts.

CC Note: This DNA sequence is not reproduced in the specification and cc has been derived from the related specification, wo3719098.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

CC Inim 9; Page 752; 1481pp; English.

CC The present sequence encodes a Helicobacter pylori cytoplasmic CC protein involved outer membrane or cell wall biosynthesis.

CC The protein may be used in a vaccine to prevent or treat H. pylori CC infection or to identify H. pylori polypeptide binding compounds, CC useful as potential H. pylori life cycle activators or inhibitors.

CC The genomic sequence of H. pylori (ATCC 55679) was determined from CC overlapping contigs generated by mechanically shearing the CC nucleotides, and the predicted coding regions defined by computer CC evaluation. To identify likely H. pylori antigens for vaccine CC development, the amino acid sequences predicted from various ORE CC were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences CC of interest, particular regions can be isolated from H. pylori by the computation for recombinant polypeptide production, e.g. in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention can be used in diagnosis kits and assays, an compositions and vaccines for S. pneumoniae Sequence 843 BP; 775 x
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or CDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome. Products from the present protection is the sequence of commercial importance, or expression modulating the present of the S. pneumoniae genome.
                                                                                                                                                                                                          02-OCT-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptococcus pneumoniae genome fragment SEQ ID NO:356. Streptococcus pneumoniae; S. pneumoniae; genome; diagno computer readable medium; vaccine; pharmaceutical compo streptococcus pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       669

Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.

The present sequence represents DNA encoding Streptococcus pneumoniae MurD protein (uridine-diphosphate-N-acetylnuramyl-L-alanyl-D-isoglutamate ligase). The murD protein is useful in a method for identifying compounds that inhibit Streptococcus pneumoniae murD activity. Compounds identified are potentially useful as antibacterial agents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            uridine-diphosphate-N-acetylmuramyl-L-alanyl-D-isoglutamate ligase. The nucleic acid can be used for the production of recombinant Murb protein and the implementation of large scale screens to identify new antibacterial compounds targeted at the stem peptide biosynthetic pathway involved in the synthesis of the bacterial cell wall. Structural analysis of the Murb protein will enable structure-based drug design to develop novel compounds for the treatment of antibiotic content is the synthesis of the synthesis o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Column 22-24; 14pp; English.
This sequence represents the mRNA for the Streptococcus pneumoniae murD biosynthesis protein. The murD gene encodes the enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Streptococcus pneumoniae mur D biosynthetic gene - which encodes uridine-diphosphate-N-acetylnuramyl-L-alanyl-D-isoglutamate ligase,. ...
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10-NOV-1998.
